

# SpaceSaver

## Introduces the Nation's First Fully-Automated Parking Garage

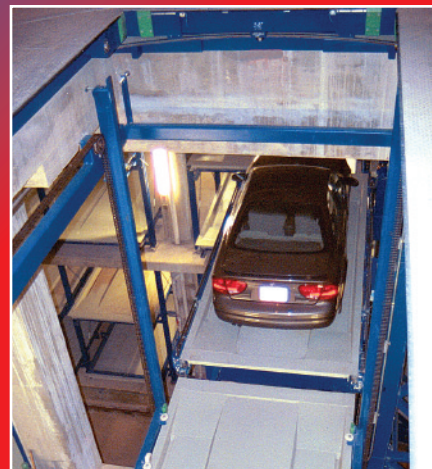

A revolutionary new, completely mechanized, quick-change pallet parking system with turntables was recently installed by SpaceSaver Parking Company in the Summit Grand Parc in Washington, DC.

It's the first of its kind in the United States and is designed to provide innovative and economical parking solutions by efficiently stacking cars side by side and on top of one another. It literally provides parking for many more times the number of cars using the same amount of space.

The Summit Grand Parc was built using our Multiparker product line that is designed to safely accommodate hundreds of vehicles. It has a structure similar to a high-rack shelving system on as many as 20 parking levels with platforms moving laterally and longitudinally.

*You're cordially invited to join us for a bus tour of the Summit Grand Parc in Washington, DC on September 25th. Contact Jackie Smith at 773-486-6900 or e-mail: jackies@spacesaverparking.com.*

These machines are the most technically advanced automatic parking systems available anywhere in the world today, providing a combination of high vehicle density and fast retrieval of parked cars.

To receive a complimentary copy of our new **Product Range** brochure, contact Jackie Smith at **773-486-6900** or e-mail [jackies@spacesaverparking.com](mailto:jackies@spacesaverparking.com).
